

## **Bugs:**

- Occasional graphics quirks depending on the emulator you're using. This is related to the color hack implemented. To be precise, the original VBA and TGB Dual will have a white screen during menus at times. Your game has not crashed, just exit out of the menu by hitting A or B and it'll be back to normal - this is related to vblank issues. I recommend using BGB or VBA-M, though I do believe VBA-M has a bit of issues with it too. I'm not sure.
- Very other bug in RBY still exists except for Missingno and the item duplication glitch

## **Untested:**

- The upper Battle Factory classes. Everything seems to work fine, though.

## **Showdown Server bugs:**

- Substitute is not updated to resist paralysis, etc.
- Not a bug, but the server currently doesn't have shinies either at the moment (and inferior sprites in general)

*Have a bug report? Please submit it on the PokeCommunity, Skeetendo or Reborn thread. Thank you!*
